EXPERIMENT- 4- Implement a JavaScript based form validation for user input fields

AIM:

To Implement a JavaScript based form validation for user input fields

PROCEDURE:

1. Open VS Code and create an HTML file and write the basic syntax.
2. Custom an internal CSS file and link with the HTML file.
3. Create javascript tag i.e.<script> tag to fill functions of javascript and data required.
4. Use script tag under head /body tag of html code
5. Use container div tag to create layouts for the form .
6. Using javascript functions add input tags to get input from users.
7. Style the page using css under div classes.
8. Run the code to check the expected output and verify the validation.

PROGRAM CODE:

```
<!DOCTYPE html>
<html>
<head>
  <title>Simple Form Validation</title>
  <style>
    body {
      font-family: Arial;
      background-color: #f2f2f2;
    }
    .container {
      width: 380px;
      margin: 50px auto;
      background: white;
      padding: 20px;
      border-radius: 10px;
      box-shadow: 0 4px 8px rgba(0,0,0,0.2);
    }
    input {
      width: 95%;
      padding: 8px;
      margin: 8px 0;
    }
    button {
      width: 100%;
      padding: 8px;
      margin-top: 5px;
      background-color: #3366cc;
      color: white;
      border: none;
      cursor: pointer;
    }
    button:hover {
      background-color: #254a99;
    }
  </style>
```

```

<script>
function validateForm() {
    let name = document.getElementById("name").value;
    let email = document.getElementById("email").value;
    let phone = document.getElementById("phone").value;

    let emailPattern = /^[^ ]+@[^ ]+\.[a-z]{2,3}$/;

    let phonePattern = /^[0-9]{10}$/;

    if (name === "" || email === "" || phone === "") {
        alert("All fields are mandatory!");
    }
    else if (!email.match(emailPattern)) {
        alert("Please enter a valid email address!");
    }
    else if (!phone.match(phonePattern)) {
        alert("Phone number must contain exactly 10 digits!");
    }
    else {
        alert("Validation successful!");
    }
}

function showData() {
    let name = document.getElementById("name").value;
    let email = document.getElementById("email").value;
    let phone = document.getElementById("phone").value;

    alert(
        "Name: " + name + "\n" +
        "Email: " + email + "\n" +
        "Phone: " + phone
    );
}

function clearForm() {

```

```
document.getElementById("name").value = "";
document.getElementById("email").value = "";
document.getElementById("phone").value = "";
}
</script>
</head>

<body>

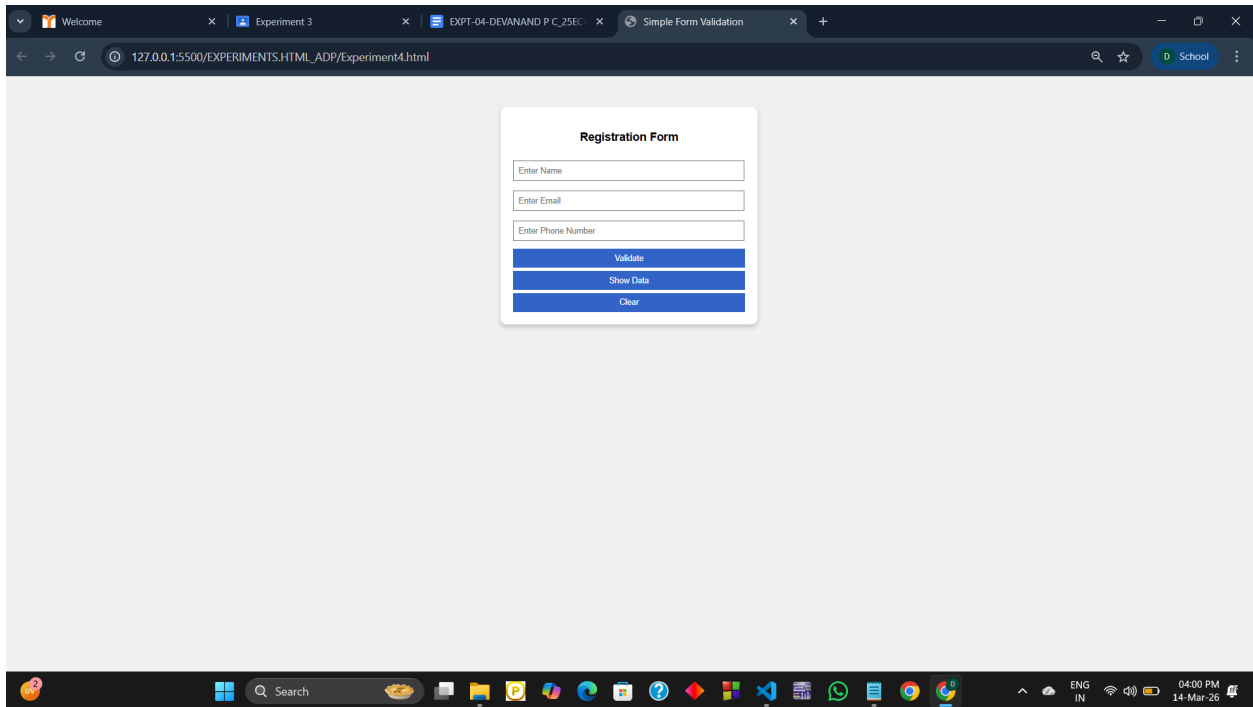

<div class="container">
  <h3 align ="center">Registration Form</h3>

  <input type="text" id="name" placeholder="Enter Name">
  <input type="email" id="email" placeholder="Enter Email">
  <input type="text" id="phone" placeholder="Enter Phone Number">

  <button onclick="validateForm()">Validate</button>
  <button onclick="showData()">Show Data</button>
  <button onclick="clearForm()">Clear</button>
</div>

</body>
</html>
```

OUTPUT:

The screenshot displays a web browser window with multiple tabs. The active tab is titled 'Simple Form Validation' and shows a URL '127.0.0.1:5500/EXPERIMENTS.HTML_AD/Experiment4.html'. The browser's address bar and tabs are visible at the top. The main content area features a 'Registration Form' centered on a light gray background. The form has a white background and a thin gray border. It contains three text input fields labeled 'Enter Name', 'Enter Email', and 'Enter Phone Number'. Below these fields are three blue buttons with white text: 'Validate', 'Show Data', and 'Clear'. The Windows taskbar is visible at the bottom of the screen, showing various application icons and the system clock indicating 04:00 PM on 14-Mar-26.

RESULT:

The Javascript based form validation for user input fields is successfully implemented.
