EXPERIMENT- 5- Develop a dynamic web page using Javascript DOM manipulation

AIM:

To Develop a dynamic web page using Javascript DOM manipulation

PROCEDURE:

- 1. Open VS Code and create an HTML file and write the basic syntax.**
- 2. Custom an internal CSS file and link with the HTML file.**
- 3. Create javascript tag i.e.<script> tag to fill functions of javascript and data required.**
- 4. Use script tag under head /body tag of html code**
- 5. Using javascript functions add input tags to get input from users.**
- 6. Use button click tags from JavaScript to make the page responsive.**
- 7. Style the page using css.**
- 8. Run the code to check the expected output and verify the validation.**

PROGRAM CODE:

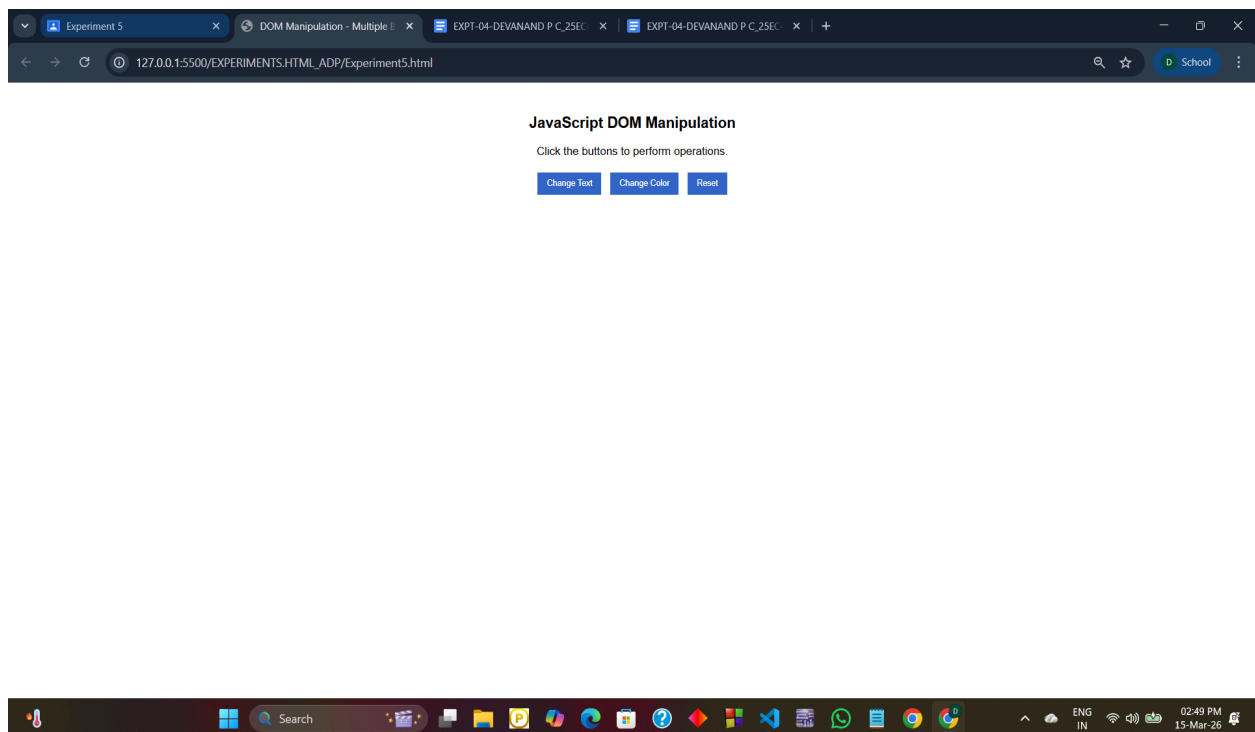

```
<!DOCTYPE html>
<html>
<head>
  <title>DOM Manipulation - Multiple Buttons</title>
  <style>
    body {
      font-family: Arial;
      text-align: center;
      margin-top: 50px;
    }
    p {
      font-size: 18px;
    }
    button {
      padding: 10px 15px;
      margin: 5px;
      background-color: #3366cc;
      color: white;
      border: none;
      cursor: pointer;
    }
    button:hover {
      background-color: #254a99;
    }
  </style>
  <script>
    function changeText() {
      document.getElementById("message").innerHTML =
        "The text has been changed using JavaScript!";
    }
    function changeColor() {
      document.getElementById("message").style.color = "red";
    }

    function resetContent() {
      document.getElementById("message").innerHTML =
```

```
"Click the buttons to perform operations.";
document.getElementById("message").style.color = "black";
}
</script>
</head>
<body>
  <h2>JavaScript DOM Manipulation</h2>
  <p id="message">Click the buttons to perform operations.</p>

  <button onclick="changeText()">Change Text</button>
  <button onclick="changeColor()">Change Color</button>
  <button onclick="resetContent()">Reset</button>
</body>
</html>
```

OUTPUT:

RESULT:

The Javascript based DOM Manipulation with multiple buttons is successfully implemented.
